What have we learned?

Lou Burnard Consulting   *2018-04-14*

Over to you

In this last practical session, you should test your understanding of what you've learned so far. We suggest you choose one or more of the following tasks

- Carry on with your transcription of *Passages in the life....* Check carefully for OCR errors, using the oXygen spell checker. If you notice any systematic problems (e.g. the use of asterisks), try using a regular expression to tidy them up.

- Try upgrading your transcription from level 0 to level 1. This will mostly involve looking at the `<hi>` elements in your document and changing them to more meaningful markup. To validate your document against eltec-1 instead of eltec-0, you can simply edit the `?xml-model` line at the start of the file. (But remember to save the document under a different name!)

- Tired of 19th century britChickLit? Work on a file you scanned yesterday. How many of the techniques you used today are applicable ?

- When you save your ELTeC files, make sure they are valid.

.

At the end of the session, we'll compare notes and report experience.
